PolyScience Water Baths are a sleek, cleanly designed addition to your bench, offering absolute control, precision and convenience.
General Purpose Water Baths

The general purpose water bath is a fundamental product in the lab. Many manufacturers often sacrifice quality and innovation strictly to meet the demands of a tight budget. PolyScience believes you can have both, as well as convenience, durability and safety.
General Water Baths

**REAR-MOUNTED DRAIN**
Reservoir drain only on 10 liter and larger baths

**RESERVOIR**
Clear, hinged cover tilts out of the way, lets condensation drain back into the bath, prevents puddles on your bench.

**HIGH-GABLED LID**
High-gabled lid accommodates taller media bottles and provides easy clearance when opening and closing.

**REAR-MOUNTED DRAIN**
Reservoir drain only on 10 liter and larger baths

**RESERVOIR**
Clear, hinged cover tilts out of the way, lets condensation drain back into the bath, prevents puddles on your bench.

**HIGH-GABLED LID**
High-gabled lid accommodates taller media bottles and provides easy clearance when opening and closing.

**FULL-COLOR TFT LCD DISPLAY**
Full-color TFT LCD display features high contrast and excellent clarity allowing for easy viewing, even from across the room.

**DIGITAL CONTROL PANEL**
Features large control buttons for easy access and navigation of the intuitive interface.

**PROGRAMMABLE PRESETS**
Programmable presets save programs that control both time and temperature settings of your frequently used needs.
Feature Details

Our goal with our water baths has always been to strike a perfect balance between cost and reliable precise temperature control. Something we have once again achieved with our new generation of PolyScience water baths.

Clear Hinged Gable Cover
Tilting, see-through Reservoir Cover

- Standard feature on all of our water baths
- When you tilt the lid back, condensation drains down into the bath.
- High-clearance lid design accommodates taller media bottles so you can temper your samples with the cover closed and achieve improved control and uniformity.
- Since the cover is clear, you can see your samples at any time without having to lift the lid and disturb your work.

Reservoir
Prevents puddles on your bench
When you tilt the Hinged Gable Cover back, condensation drains down into the bath.

Drain
Rear-Mounted Drain
Available on 10 Liter or larger Water Baths.
Our goal with our water baths has always been to strike a perfect balance between cost and reliable precise temperature control. Something we have once again achieved with our new generation of PolyScience water baths.

TFT Display

PolyScience water baths are the first baths on the market to utilize a full color TFT display.

- User-settable High Limit Value
- User-settable alarms: audible, visible or both
- Displays actual and set point temperature simultaneously
- Programmable pre-sets for frequently used temperatures
- At the end of any preset, the bath will automatically enter Eco Mode, for low energy no-heat operation. Added safety and energy savings.
- Integrated timer
- Calibration off-set feature
- Primary and automatic safety thermostats
- Interface offers five selectable languages: English, French, German, Spanish or Chinese

Silicone-pad

Heating Element

The silicone-pad heating element was specifically designed to apply even heating throughout the entire bottom surface of the tank, creating excellent temperature uniformity.

Handles

Handles for easy positioning

Recessed handles enable easy positioning and minimize the footprint to allow space for additional equipment on lab work surfaces.
General Purpose Water Baths Specifications

Research, communication and listening to our customers needs are what drives the innovation to make the new PolyScience line of water baths stand out from the competition. These new intelligent water baths are the perfect blend of control, convenience, safety and of course budget.

General Purpose Water Bath
A vessel that can be held at a desired temperature via an integral heater and temperature controller. A General Purpose Water Bath does not incorporate a mechanical means of fluid circulation.

Working Access/Bath Opening
This dimension provides information on the amount of available space within the Water Bath for glassware, sample holders, test tube racks, etc.

Temperature Range
This is the temperature range that the equipment is capable of achieving and may be broader than the Working Temperature Range. This extended temperature range is particularly useful for the cooling of devices — such as lasers — that must be brought up to a temperature above ambient before operation can begin.

Temperature Stability
This represents how precisely an instrument maintains a set-point temperature and is expressed as a plus/minus value. For example, the actual bath temperature in a circulating bath with a set-point of 23.20°C and a temperature stability of ±0.01°C may vary from 23.19°C to 23.21°C.

ECO Mode
At the conclusion of any preset, the bath will automatically enter Eco Mode, for low energy no-heat operation. Added safety and energy savings.
